

DIRTYPRICE

Updated: 31 Mar 2016

Use **DIRTYPRICE** to calculate the dirty price of a bond. The dirty price of a bond is the discounted cash flow value of all the remaining coupons plus the discounted cash flow value of the redemption amount. This is equivalent to the clean price of the bond plus the accrued interest.

You can use **DIRTYPRICE** for bonds that pay regular period interest, bonds with an odd first coupon period, bonds with an odd last coupon period, and bonds with both an odd first and an odd last coupon period.

Syntax

```
Public Shared Function DIRTYPRICE(  
    ByVal Settlement As Date,  
    ByVal Maturity As Date,  
    ByVal Rate As Double,  
    ByVal Yield As Double,  
    ByVal Redemption As Double,  
    ByVal Frequency As Double,  
    ByVal Basis As String,  
    ByVal Issue As Date,  
    ByVal FirstCoupon As Date,  
    ByVal LastCoupon As Date,)
```

Arguments

Settlement

the settlement date of the bond. *Settlement* is an expression that returns a **Date**, or of a type that can be implicitly converted to **Date**.

Maturity

the maturity date of the bond. *Maturity* is an expression that returns a **Date**, or of a type that can be implicitly converted to **Date**.

Rate

the bond's annual coupon rate. *Rate* is an expression that returns a **Double**, or of a type that can be implicitly converted to **Double**.

Yield

the bond's annual yield. *Yield* is an expression that returns a **Double**, or of a type that can be implicitly converted to **Double**.

Redemption

the bond's redemption value per 100 face value. *Redemption* is an expression that returns a **Double**, or of a type that can be implicitly converted to **Double**.

Frequency

the number of coupon payments per year. For annual payments, *Frequency* = 1; for semi-annual, *Frequency* = 2; for quarterly, *Frequency* = 4; for bi-monthly, *Frequency* = 6; for monthly, *Frequency* = 12. For bonds with Basis = "A/364" or 9, you can enter 364 for payments made every 52 weeks, 182 for payments made every 26 weeks, 91 for payments made every 13 weeks, 28 for payments made every 4 weeks, 14 for payments made every 2 weeks, and 7 for weekly payments. *Frequency* is an expression that returns a **Double**, or of a type that can be implicitly converted to **Double**.

Basis

the daycount convention.

Basis	Day count basis
0, "BOND"	US (NASD) 30/360
1, "ACTUAL"	Actual/Actual
2, "A360"	Actual/360
3, "A365"	Actual/365
4, "30E/360 (ISDA)", "30E/360", "ISDA", "30E/360 ISDA", "EBOND"	European 30/360
5, "30/360", "30/360 ISDA", "GERMAN"	30/360 ISDA
6, "NL/ACT"	No Leap Year/ACT
7, "NL/365"	No Leap Year /365
8, "NL/360"	No Leap Year /360
9, "A/365"	Actual/364
10, "BOND NON-EOM"	US (NASD) 30/360 non-end-of-month
11, "ACTUAL NON-EOM"	Actual/Actual non-end-of-month
12, "A360 NON-EOM"	Actual/360 non-end-of-month
13, "A365 NON-EOM"	Actual/365 non-end-of-month
14, "30E/360 NON-EOM", "30E/360 ICMA NON-EOM", "EBOND NON-EOM"	European 30/360 non-end-of-month
15, "30/360 NON-EOM", "30/360 ISDA NON-EOM", "GERMAN NON-EOM"	30/360 ISDA non-end-of-month
16, "NL/ACT NON-EOM"	No Leap Year/ACT non-end-of-month
17, "NL/365 NON-EOM"	No Leap Year/365 non-end-of-month
18, "NL/360 NON-EOM"	No Leap Year/360 non-end-of-month
19, "A/365 NON-EOM"	Actual/364 non-end-of-month

Basis is an expression that returns a **String**, or of a type that can be implicitly converted to **String**.

Issue

the issue date of the bond; the date from which the bond starts accruing interest. *Issue* is an expression that returns a **Date**, or of a type that can be implicitly converted to **Date**.

FirstCoupon

the first coupon date of the bond. The period from the issue date until the first coupon date defines the odd interest period. All subsequent coupon dates are assumed to occur at regular

periodic intervals as defined by *Frequency*. *FirstCoupon* is an expression that returns a **Date**, or of a type that can be implicitly converted to **Date**.

LastCoupon

the last coupon date of the bond prior to the maturity. The period from the last interest date until the maturity date defines the odd interest period. All coupon dates from *FirstCoupon* to *LastCoupon* are assumed to occur at regular periodic intervals as defined by *Frequency*. *LastCoupon* is an expression that returns a **Date**, or of a type that can be implicitly converted to **Date**.

Return Type

Double

Remarks

- If *Settlement* is NULL then *Settlement* equals the current system date.
- If *Rate* is NULL then *Rate* = 0.
- If *Yield* is NULL then *Yield* = 0
- If *Redemption* is NULL then *Redemption* = 100.
- If *Frequency* is NULL then *Frequency* = 2.
- If *Basis* is NULL then *Basis* = 1.
- If *Maturity* <= *Settlement* then no rows are returned.
- If *Frequency* invalid an error is returned.
- If *Basis* invalid (see above list) an error is returned.
- If *Maturity* is NULL then *Maturity* equals the current system date.
- To calculate the dirty price for a bond paying regular periodic interest just enter *Maturity* and *Settlement*.
- To calculate the dirty price for bond with an odd first coupon where the settlement date is before the first coupon date, enter *Issue*, *FirstCoupon*, *Settlement*, and *Maturity*. If the settlement date is on or after the first coupon date just enter *Maturity* and *Settlement*.
- To calculate the dirty price for a bond with an odd last coupon enter *LastCoupon*, *Settlement*, and *Maturity*.
- To calculate the dirty price for bond with an odd first coupon and an odd last coupon where the settlement date is before the first coupon date, enter *Issue*, *FirstCoupon*, *LastCoupon*, *Settlement*, and *Maturity*. If the settlement date is on or after the first coupon date just enter *LastCoupon*, *Maturity* and *Settlement*.
